

“Data storage, analysis and sharing workshop” (WP5)

Time: January 20-22th, 2009

Where: Max-Planck-Institute for Molecular Genetics, Berlin, Germany

Organisation: Christophe Roos (Medicel) (christophe.roos@medicel.com)

Registration: please send email conforming your attendance to Tuyet Tran (Tuyet.Tran@medicel.com) by January 4th, 2008.

The workshop is divided in three parts:

1. Presentations given by all participants about the data which they are presently gathering and need to analyze. The presentation should also cover the way data is analyzed.

2. Demonstration by Medicel of the data analysis capabilities of the Integrator and hands-on sessions for three pre-defined use cases. The idea being that the use cases should be developed by Medicel based on real examples from the partners. Suggestions from the partners are therefore necessary and can be mailed to Gabriela or Christophe. Medicel will also contact the partners individually to ask for examples.

3. Discussions in smaller groups involving partners providing analysis methodologies on one hand and partners with biological measurement data on the other hand.

The workshop agenda will be announced shortly.
